

DATA ANALYTICS INTERNSHIP

MODULE 3.1 — SUBSCRIPTION DATA ANALYSIS

Submitted By	Jumana Faby Khan
Institute	National Institute of Technology Calicut (NIT Calicut)
Programme	B.Tech — Electronics & Communication Engineering
Module	3.1 — Subscription Dataset Analysis
Date Submitted	01 July 2025

CONFIDENTIAL — FOR INTERNSHIP EVALUATION PURPOSES ONLY

Deliverable 1 — Data Overview & Structured Format

1.1 Dataset Background

The dataset provided for Module 3.1 represents approximately 12% of the total subscription base, restructured specifically for learning purposes. As a result, the findings derived from this sample may not reflect the actual business scenario and are intended solely for analytical practice.

The raw data was received in an unstructured format and subsequently cleaned, standardised, and enriched with derived fields to enable meaningful analysis across multiple deliverables.

1.2 Dataset Dimensions

Attribute	Details
Total Records	16,519 subscription rows
Brands Covered	OL, OLM, OLH, OLT, OLB (5 Outlook brands)
Date Range	Subscription start dates spanning 2013–2024
Key Columns	BRAND, SUBCODE, DESIGNATION, CITY, START_DATE, EXPIRY_DATE, LAST_EXPIRY_DATE, TENURE_MONTHS, EXPIRY_MONTH
Derived Fields Added	TENURE_MONTHS, EXPIRY_MONTH, cleaned CITY, standardised DESIGNATION
Final Format	Structured XLSX (subs_mail_clean.xlsx)

1.3 Data Cleaning Steps Applied

- City names standardised — directional suffixes (North, South, East, West, Central) stripped and grouped under a base city name.
- Designation field populated with 'Not Specified' where left blank; free-text entries mapped to standardised category buckets.
- START_DATE and EXPIRY_DATE converted to uniform DD-MM-YYYY date format.
- TENURE_MONTHS computed as the difference in months between START_DATE and LAST_EXPIRY_DATE.
- EXPIRY_MONTH extracted from EXPIRY_DATE in YYYY-MM format for monthly expiry analysis.
- Duplicate SUBCODE entries reviewed and resolved; brand codes validated against known Outlook brand identifiers.

1.4 Snapshot of Cleaned Dataset

The screenshot below shows the structured dataset post-cleaning, as loaded in Microsoft Excel:

	A	B	C	D	E	F	G	H	I
1	BRAND	SUBCODE	DESIGNATION	CITY	START_DATE	EXPIRY_DATE	LAST_EXPIRY_DATE	TENURE_MONTHS	EXPIRY_MONTH
2	OLM	168452	Not Specified	BANGALORE	01-03-2018	01-05-2024	01-05-2024	74	2024-05
3	OLH	8131	Not Specified	PANIPAT	15-09-2024	31-03-2025	31-03-2025	6	2025-03
4	OLT	78010	Academic & Education	ANAND	01-07-2019	01-11-2020	01-02-2025	16	2020-11
5	OL	47882	Academic & Education	KOLKATA	13-03-2017	01-02-2025	01-02-2025	94	2025-02

Figure 1.1 — Snapshot of subs_mail_clean.xlsx (post data cleaning)

Deliverable 2 — Brand-wise Subscription Count by Tenure

2.1 Objective

This section examines how subscription volumes are distributed across different tenure buckets for each of the five Outlook magazine brands — Outlook (OL), Outlook Business (OLB), Outlook Hindi (OLH), Outlook Money (OLM), and Outlook Traveller (OLT). Tenure is defined as the number of months elapsed between a subscriber's start date and their last expiry date.

2.2 Tenure Bucketing Methodology

Raw TENURE_MONTHS values were grouped into the following standardised buckets to facilitate cross-brand comparisons:

- Invalid — negative or erroneous tenure values flagged during cleaning.
- Zero — tenure of exactly 0 months (same-day cancellation or data entry anomaly).
- 1–6 M — short-term subscribers (up to half a year).
- 7–12 M — standard annual subscription cycle.
- 13–24 M — medium-term subscribers (1–2 years).
- 25–36 M — multi-year subscribers (2–3 years).
- 37–60 M — long-term subscribers (3–5 years).
- 61–120 M — very long-term subscribers (5–10 years).
- 121–261 M — ultra long-term subscribers (10+ years).

2.3 Heatmap Visualisation

The heatmap below presents the subscriber count for each brand across all tenure buckets. Darker shades indicate higher subscriber concentrations.

Figure 2.1 — Subscriber Count by Brand and Tenure Bucket (Heatmap)

2.4 Key Observations

The 7–12 month tenure bucket overwhelmingly dominates across all brands, accounting for 9,300 of the 16,519 total subscribers (56.3%). This reflects the standard annual subscription cycle as the most prevalent purchase pattern across the Outlook portfolio.

Outlook Money (OLM) and Outlook Traveller (OLT) record the highest subscriber counts in the 7–12 month bracket — 2,522 and 2,436 respectively — indicating strong annual renewal behaviour in the finance and travel segments.

Outlook Business (OLB) also shows a significant concentration at 7–12 months (2,130 subscribers), suggesting that corporate and professional readers tend to subscribe on a yearly basis rather than multi-year plans.

The 1–6 month bucket (1,742 total) is the second-most populated cohort, driven by Outlook (533) and Outlook Money (473), pointing to a meaningful short-tenure trial or gift-subscription segment.

Long-tenure subscribers (61–120 months) number 1,358 in total, with Outlook Money leading at 570 — reflecting the brand's loyal, financially-engaged readership. The ultra-long cohort (121–261 months) is almost entirely composed of Outlook Money subscribers (278 out of 293), confirming its legacy subscriber base.

Outlook Hindi (OLH) has the smallest subscriber base overall (1,378), with negligible presence in the extreme long-tenure and zero-tenure brackets. Practically no OLH subscribers have held subscriptions beyond 10 years, suggesting a relatively younger or more transient subscriber base compared to other brands.

Invalid and Zero tenure records together account for only 75 rows (0.45% of total), confirming that the data cleaning pipeline effectively resolved the majority of inconsistencies.

Deliverable 3 — Expiry Analysis: May 2024 to March 2025

3.1 Objective

This section analyses subscription expiries across all five Outlook brands for the 11-month window spanning May 2024 to March 2025. The goal is to identify peak expiry months, brand-level expiry patterns, and periods of elevated churn risk that could inform renewal outreach strategies.

3.2 Methodology

The EXPIRY_MONTH field (derived from EXPIRY_DATE in YYYY-MM format) was filtered to include only records falling within the May 2024 to March 2025 range. Counts were then aggregated by brand and by month to produce the stacked bar chart below. The chart is sorted in descending order of total expiries per month to highlight the highest-risk periods.

3.3 Visualisation

The stacked bar chart below shows the brand-wise monthly expiry counts across the analysis window:

Figure 3.1 — Subscription Expiries by Brand and Month (May 2024 to March 2025)

3.4 Monthly Expiry Summary

The table below summarises total expiries per month across all brands:

Month	Total Expiries	Top Brand	Top Brand Count	Rank
Jun 2024	4,904	Outlook Traveller	2,029	#1
Jul 2024	2,405	Outlook Traveller	829	#2
Aug 2024	1,641	Outlook Traveller	526	#3
May 2024	1,321	Outlook Business	390	#4
Feb 2025	1,086	Outlook Traveller	412	#5
Oct 2024	1,061	Outlook Traveller	332	#6
Dec 2024	974	Outlook Traveller	328	#7
Sep 2024	799	Outlook Traveller	325	#8

Mar 2025	684	Outlook Business	238	#9
Jan 2025	671	Outlook Traveller	334	#10
Nov 2024	611	Outlook Traveller	305	#11

3.5 Key Observations

June 2024 is by far the peak expiry month with 4,904 total expirations — more than double the next highest month, July 2024 at 2,405. This represents a critical renewal window where targeted outreach could significantly impact retention.

Outlook Traveller (OLT) dominates expiry volumes in 9 out of 11 months, consistently recording the highest brand-level expiries. This aligns with OLT's large 7 to 12 month subscriber base identified in Deliverable 2, where a large cohort of annual subscribers likely renewed around a similar time of year.

Outlook Business (OLB) leads expiries in May 2024 (390) and March 2025 (238), suggesting a different subscription cycle compared to other brands, likely tied to corporate financial year cycles or bulk institutional subscriptions.

The June to August 2024 window accounts for approximately 55% of all expiries in the analysis period, indicating a strong seasonal concentration of renewals in the early summer months and a critical intervention window for retention teams.

From September 2024 onwards, monthly expiries decline significantly, with most months falling below 1,000 — October 2024 (1,061) and February 2025 (1,086) are minor exceptions. November 2024 records the lowest count at 611, offering an opportunity for proactive long-lead renewal campaigns ahead of the anticipated June 2025 peak.

Outlook Hindi (OLH) contributes modestly across all months, with its highest expiry count in June 2024 (343) and negligible volumes in the later months, consistent with its smaller overall subscriber base.

Outlook Money (OLM) shows a relatively even spread across months compared to other brands, suggesting a more distributed acquisition pattern without a pronounced seasonal peak, which may reflect its subscription model or reader demographics.

Deliverable 4 — Top 40 Cities by Brand

4.1 Objective & Methodology

For each of the five Outlook brands, subscriber counts were aggregated at the city level after applying the city normalisation step described in Deliverable 1 — directional suffixes (North, South, East, West, Central) were stripped so that variants such as 'Delhi North' and 'Delhi South' were consolidated under a single 'Delhi' entry. The top 40 cities by subscriber count were then ranked and visualised as horizontal bar charts per brand.

4.2 Outlook (OL) (Total: 2,198 subscribers across top 40 cities)

Delhi leads Outlook's city-level subscriber base with 363 subscribers, followed closely by Bangalore (309) and Mumbai (182). The top three cities alone contribute approximately 39% of the total top-40 count. Notable is the strong presence of C/O APO (84 subscribers), reflecting a meaningful defence-personnel readership. The distribution shows a steep drop-off after the top 6 metro cities, with the remaining 34 cities each contributing fewer than 100 subscribers.

Total: 2,198 subscribers across 40 cities

Figure 4.1 — Outlook: Top 40 Cities by Subscriber Count

4.3 Outlook Business (OLB) (Total: 2,088 subscribers across top 40 cities)

Delhi (295), Bangalore (217), Hyderabad (191), and Mumbai (189) form a tight cluster at the top of Outlook Business's city distribution, reflecting the brand's concentration in India's major corporate and IT hubs. Pune (123) and Chennai (103) round out the top six, consistent with their large professional services and technology sectors. The remaining cities show a long tail, with Mangalore (2) at the bottom — the smallest city count in the top 40.

Total: 2,088 subscribers across 40 cities

Figure 4.2 — Outlook Business: Top 40 Cities by Subscriber Count

4.4 Outlook Hindi (OLH) (Total: 655 subscribers across top 40 cities)

Outlook Hindi's geographic distribution is distinctly North India-heavy. Delhi dominates with 114 subscribers — over 17% of the top-40 total. C/O APO ranks second at 57, underscoring the Hindi brand's significant reach among defence personnel. Lucknow (44), Ghaziabad (39), Jaipur (28), and Kanpur (20) further confirm the Hindi belt concentration. Southern cities like Chennai (4), Kochi (4), and Thrissur (1) contribute minimally, as expected for a Hindi-language publication.

Total: 655 subscribers across 40 cities

Figure 4.3 — Outlook Hindi: Top 40 Cities by Subscriber Count

4.5 Outlook Money (OLM) (Total: 3,299 subscribers across top 40 cities)

Outlook Money is the brand with the largest top-40 city subscriber base at 3,299. Uniquely, Bangalore (463) edges out Mumbai (389) and Delhi (344) for the top spot — reflecting the city's high concentration of finance professionals, startup investors, and tech employees with strong personal finance interest. Pune (214), Hyderabad (213), and Chennai (201) also feature prominently. The top 6 cities together account for approximately 55% of the top-40 total.

Total: 3,299 subscribers across 40 cities

Figure 4.4 — Outlook Money: Top 40 Cities by Subscriber Count

4.6 Outlook Traveller (OLT) (Total: 2,543 subscribers across top 40 cities)

Delhi (382), Bangalore (295), and Mumbai (192) lead Outlook Traveller's city rankings. The brand has a notably broad geographic spread — it is the only brand where Kolkata (159) and Pune (150) both feature strongly in the top 6, suggesting a wide leisure-travel readership across metros. C/O APO (55) again appears, consistent with the travel brand's appeal to defence personnel. The long tail is relatively shallow, with Visakhapatnam (8) at rank 40.

Total: 2,543 subscribers across 40 cities

Figure 4.5 — Outlook Traveller: Top 40 Cities by Subscriber Count

4.7 Cross-Brand City Observations

Delhi is the top city for four out of five brands (Outlook, Outlook Business, Outlook Hindi, and Outlook Traveller), reflecting the capital's dominant role in India's subscription readership. Bangalore leads only for Outlook Money, consistent with its tech-savvy, finance-aware population.

The top five metro cities — Delhi, Bangalore, Mumbai, Hyderabad, and Chennai — appear in the top 10 across all five brands, confirming that urban concentration is a defining characteristic of Outlook's subscription base regardless of brand.

C/O APO (Armed Post Office) appears as a significant entry across all brands except Outlook Business, highlighting a consistent defence-community readership. It ranks as high as 2nd for Outlook Hindi (57 subscribers), indicating this segment is particularly drawn to Hindi-language and general news content.

Outlook Hindi shows the most geographically concentrated distribution, with over 70% of its top-40 subscribers located in Hindi-belt states (Uttar Pradesh, Rajasthan, Uttarakhand, Bihar, Madhya Pradesh). In contrast, Outlook Money and Outlook Traveller exhibit the most pan-India spread, with Southern and Western cities featuring more prominently in their top 20.

Deliverable 6 — Designation Analysis by Brand

6.1 Objective & Methodology

This section analyses the professional designation profile of subscribers for each of the five Outlook brands. Raw designation fields were cleaned and mapped into 14 standardised categories: Consultants & Entrepreneurs, Managers, Directors, C-Suite & Top Leadership, Academic & Education, Medical & Healthcare, Engineers & IT, Legal & Finance, Retired, Administration & Support, Government & Defence, Media & Creative, Homemaker, and Others.

A significant proportion of subscribers across all brands did not provide a designation (recorded as 'Not Specified'). The charts below show only the specified subset, with the unspecified percentage noted in the title of each chart. This context is important when interpreting the distributions — the specified cohort may not be fully representative of the brand's total subscriber demographics.

6.2 Outlook (OL)

Total subscribers: 3,345 | Subscribers with designation: 535 | Unspecified: 84.0% unspecified

Consultants & Entrepreneurs lead with 83 subscribers, followed by Managers (75), Academic & Education (72), and Retired (66). Outlook stands out as the only brand where the Retired category features so prominently in the top 4, suggesting a significant mature readership. The relatively even spread across the top 8 categories — all between 29 and 83 — indicates a broad, diverse professional base rather than concentration in any single occupation.

Figure 6.1 — Outlook: Designation Categories (535 specified subscribers)

6.3 Outlook Business (OLB)

Total subscribers: 3,003 | Subscribers with designation: 142 | Unspecified: 95.3% unspecified

Outlook Business has the highest unspecified rate at 95.3%, meaning only 142 of 3,003 subscribers declared a designation. Among those who did, Managers (29) lead, followed by Consultants & Entrepreneurs (23) and Directors (23) tied at second. C-Suite & Top Leadership (22) is also prominent, reflecting the brand's professional business readership. The tight clustering of the top four categories is consistent with Outlook Business being a publication targeted at corporate decision-makers.

Figure 6.2 — Outlook Business: Designation Categories (142 specified subscribers)

6.4 Outlook Hindi (OLH)

Total subscribers: 1,378 | Subscribers with designation: 103 | Unspecified: 92.5% unspecified

Consultants & Entrepreneurs (20) lead for Outlook Hindi as well, followed by Academic & Education (15) and Managers (13). The relatively strong Academic & Education presence — second place — distinguishes OLH from most other brands and aligns with Hindi being a medium of instruction in schools and universities across North India. Counts are small across the board, as only 103 of 1,378 subscribers provided designations.

Figure 6.3 — Outlook Hindi: Designation Categories (103 specified subscribers)

6.5 Outlook Money (OLM)

Total subscribers: 4,895 | Subscribers with designation: 819 | Unspecified: 83.3% unspecified

Outlook Money has the largest specified designation base at 819 subscribers. Managers (191) dominate, followed by Consultants & Entrepreneurs (146) — together accounting for over 41% of the specified cohort. C-Suite & Top Leadership (66), Medical & Healthcare (64), and Engineers & IT (62) round out the top five, painting a picture of a financially literate, senior-professional readership. The strong Engineers & IT presence is consistent with OLM's Bangalore-led city distribution identified in Deliverable 4.

Figure 6.4 — Outlook Money: Designation Categories (819 specified subscribers)

6.6 Outlook Traveller (OLT)

Total subscribers: 3,898 | Subscribers with designation: 389 | Unspecified: 90.0% unspecified

Consultants & Entrepreneurs lead clearly at 88 subscribers, ahead of Directors (52) and Managers (50). Medical & Healthcare (34) and C-Suite & Top Leadership (34) are tied at fourth — the Medical & Healthcare category ranks higher for OLT than for any other brand, suggesting a segment of high-income healthcare professionals with strong leisure-travel interest. Retired subscribers (26) also feature, consistent with travel being a key leisure activity post-retirement.

Figure 6.5 — Outlook Traveller: Designation Categories (389 specified subscribers)

6.7 Cross-Brand Designation Observations

Consultants & Entrepreneurs is the top designation category for three brands — Outlook (OL), Outlook Hindi (OLH), and Outlook Traveller (OLT) — making it the most recurrent leading category across the portfolio. It ranks second for Outlook Money (146, behind Managers at 191) and second for Outlook Business (23, tied with Directors). This points to a broadly entrepreneurial, self-employed readership as a core Outlook audience. Managers top the charts for Outlook Business and Outlook Money, reflecting the management-professional orientation of both brands. Outlook Money's Managers category (191) is by far the largest single designation count across all brands and all categories.

The unspecified rate is extremely high across all brands — ranging from 83.3% (Outlook Money) to 95.3% (Outlook Business). This is a significant data quality limitation and means designation-based insights should be interpreted cautiously, as the specified cohort may skew toward more engaged or higher-income subscribers who proactively filled in their profiles.

Academic & Education features prominently for Outlook (3rd, 72) and Outlook Hindi (2nd, 15), both general-interest or regional-language publications, suggesting that educators and students are drawn to broad-coverage content. In contrast, this category is notably lower for Outlook Business and Outlook Money, where professional designations dominate.

Government & Defence is a minor but consistent category across all brands (between 3 and 25 subscribers), confirming the defence community's readership presence identified through C/O APO city entries in Deliverable 4. It is most significant for Outlook Money (25), reflecting interest in personal finance among government and defence employees.

Deliverable 7 — City Contribution to Total Brand Subscribers

7.1 Objective & Methodology

This section quantifies the percentage contribution of each city to the total subscriber count for each brand. The contribution is calculated as: $(\text{City Subscriber Count} \div \text{Total Brand Subscribers}) \times 100$. The top 40 contributing cities are displayed per brand, with remaining cities aggregated as 'Others'. This analysis builds on Deliverable 4 but focuses on relative share rather than absolute count.

7.2 Outlook (OL) (Total: 3,345 subscribers)

Top 40 cities shown. Others (remaining cities): 1,147 subscribers (34.3%)

Delhi contributes the highest share at 10.9% (363 subscribers), followed by Bangalore at 9.2% (309). These two cities alone account for over 20% of Outlook's total subscriber base. The top 6 cities — Delhi, Bangalore, Mumbai, Hyderabad, Kolkata, and Chennai — together contribute approximately 37% of total subscribers. The remaining 34 cities each contribute less than 3%, and the 'Others' bucket (34.3%) indicates significant geographic spread beyond the top 40.

Outlook — Top 40 Cities by Subscriber Contribution

Total subscribers: 3,345 | Others: 1,147 subscribers (34.3%)

Figure 7.1 — Outlook: Top 40 Cities by % Subscriber Contribution

7.3 Outlook Business (OLB) (Total: 3,003 subscribers)

Top 40 cities shown. Others (remaining cities): 915 subscribers (30.5%)

Delhi leads at 9.8% (295), with Bangalore (7.2%), Hyderabad (6.4%), and Mumbai (6.3%) following closely — the tightest top-4 cluster across any brand in this deliverable. Together these four cities account for approximately 29.7% of OLB's total base. The relatively low Others share (30.5%) compared to other brands suggests OLB's subscriber base is more concentrated within the top 40 cities.

Figure 7.2 — Outlook Business: Top 40 Cities by % Subscriber Contribution

7.4 Outlook Hindi (OLH) (Total: 1,378 subscribers)

Top 40 cities shown. Others (remaining cities): 723 subscribers (52.5%)

Outlook Hindi shows the highest 'Others' share at 52.5% — meaning more than half its subscribers come from cities outside the top 40. This reflects its broad grassroots reach across smaller Hindi-belt towns and semi-urban areas not captured in the named top 40. Delhi leads at 8.3% (114), with C/O APO unusually high at 4.1% (57) — the second-highest single-city contribution for any brand in this deliverable, again highlighting the defence-community readership.

Figure 7.3 — Outlook Hindi: Top 40 Cities by % Subscriber Contribution

7.5 Outlook Money (OLM) (Total: 4,895 subscribers)

Top 40 cities shown. Others (remaining cities): 1,596 subscribers (32.6%)

Bangalore leads at 9.5% (463) — the only brand where Bangalore, not Delhi, holds the top contribution slot. Mumbai (7.9%) and Delhi (7.0%) follow, making the top 3 uniquely weighted toward financial and tech hubs. The top 6 cities — Bangalore, Mumbai, Delhi, Pune, Hyderabad, and Chennai — together account for approximately 37.3% of OLM's base, with Pune (4.4%) and Hyderabad (4.4%) tied at fourth.

Figure 7.4 — Outlook Money: Top 40 Cities by % Subscriber Contribution

7.6 Outlook Traveller (OLT) (Total: 3,898 subscribers)

Top 40 cities shown. Others (remaining cities): 1,355 subscribers (34.8%)

Delhi (9.8%) and Bangalore (7.6%) lead, together accounting for 17.4% of OLT's total base. Outlook Traveller has the most balanced top-6 distribution — Mumbai (4.9%), Kolkata (4.1%), Hyderabad (3.9%), and Pune (3.8%) are all closely spaced, reflecting the brand's wide metro reach. No single city outside Delhi dominates, consistent with travel interest being a pan-India leisure behaviour.

Figure 7.5 — Outlook Traveller: Top 40 Cities by % Subscriber Contribution

7.7 Cross-Brand City Contribution Observations

Across all brands, Delhi and Bangalore consistently occupy the top two contribution slots — except for Outlook Money where Bangalore edges to #1. No city other than Delhi or Bangalore has ever held a top-2 position across any of the five brands.

Outlook Hindi has the highest 'Others' share at 52.5%, meaning the majority of its readers are distributed across smaller towns outside the named top 40. This contrasts sharply with Outlook Business, which has the lowest Others share at 30.5%, confirming OLB's strong metro concentration.

C/O APO's contribution of 4.1% for Outlook Hindi is exceptionally high relative to that brand's total and ranks 2nd among all cities — higher than any named metro except Delhi. For other brands, C/O APO contributes between 0.1% (OLB) and 1.4% (OLT), underscoring that the defence subscriber base is especially loyal to Hindi-language content.

The top 40 cities collectively account for approximately 65–70% of total subscribers across four of the five brands (OL: 65.7%, OLB: 69.5%, OLM: 67.4%, OLT: 65.2%), with Outlook Hindi being a notable exception at only 47.5% — reflecting its wide grassroots spread into smaller Hindi-belt towns. This long-tail geographic distribution has implications for targeted subscription campaigns — metro-focused campaigns would capture roughly two-thirds of the audience for most brands, but a significant rural and semi-urban segment remains underserved.

Deliverable 8 — State-wise Subscription Contribution by Brand

8.1 Objective & Methodology

This section analyses the contribution of each Indian state (and selected regions including Delhi, Army Post Office, and Foreign) to the total subscriber count for each brand. Subscriber city records were mapped to their respective states using the cleaned city-to-state reference. All five brands are displayed using lollipop charts, sorted in descending order of subscriber count. Note that 'Army Post Office' is treated as a distinct region since defence subscribers are spread across multiple locations and cannot be reliably mapped to a single state.

8.2 Outlook (OL) (Total: 3,345 subscribers across 33 states/regions)

Karnataka (435) and Maharashtra (415) lead Outlook's state-level distribution, together accounting for approximately 25.4% of the total base. Delhi (363) ranks third — the state itself, not just the city — highlighting the capital territory's outsized individual contribution. Andhra Pradesh (276) and Uttar Pradesh (273) round out the top five. The spread across 33 states/regions confirms broad national reach, though the North-East states contribute minimally (mostly 1–6 subscribers each).

Figure 8.1 — Outlook: State-wise Subscription Count

8.3 Outlook Business (OLB) (Total: 3,003 subscribers across 30 states/regions)

Maharashtra leads emphatically at 470 — the highest single-state count for any brand in this deliverable. Andhra Pradesh (334) and Uttar Pradesh (327) follow, with Delhi (295) and Karnataka (268) completing the top five. Unlike Outlook, where Karnataka and Maharashtra are neck-and-neck, OLB's Maharashtra dominance reflects Mumbai's role as India's financial capital and the home of large corporate subscriber bases. Army Post Office registers just 3 subscribers, the lowest APO count across all five brands.

Figure 8.2 — Outlook Business: State-wise Subscription Count

8.4 Outlook Hindi (OLH) (Total: 1,378 subscribers across 31 states/regions)

Uttar Pradesh overwhelmingly leads Outlook Hindi's state distribution at 274 — nearly double the next state, Maharashtra (150). Madhya Pradesh (149), Delhi (114), Bihar (107), and Rajasthan (94) follow, all Hindi-speaking heartland states, confirming OLH's strong linguistic-geographic alignment. Notably, Karnataka (46), Tamil Nadu (11), and Kerala (9) contribute very little, consistent with OLH being a Hindi-language publication. Army Post Office (57) ranks 8th — a very high relative placement compared to other brands.

Figure 8.3 — Outlook Hindi: State-wise Subscription Count

8.5 Outlook Money (OLM) (Total: 4,895 subscribers across 33 states/regions)

Maharashtra leads by a wide margin at 938 subscribers — the largest absolute state count across all five brands in this entire deliverable. Karnataka (616) and Tamil Nadu (414) and Andhra Pradesh (413) follow, reflecting the dominance of southern and western financial hubs in OLM's readership. Delhi ranks 6th at 344, lower relative to other brands, consistent with OLM's city-level data where Bangalore (not Delhi) held the top spot. The state distribution mirrors an affluent, urban-professional base concentrated in peninsular India.

Figure 8.4 — Outlook Money: State-wise Subscription Count

8.6 Outlook Traveller (OLT) (Total: 3,898 subscribers across 34 states/regions)

Maharashtra again tops the chart at 510, followed by Uttar Pradesh (406), Karnataka (400), Delhi (382), and Andhra Pradesh (355) — the most evenly distributed top-5 across any brand in this deliverable. OLT also has the widest state coverage at 34 states/regions, including Andaman & Nicobar (3) which does not appear in other brands, consistent with travel enthusiasts covering even remote island territories. Goa (25), a uniquely travel-centric state, also features here and ranks higher relative to its size than in most other brands.

Figure 8.5 — Outlook Traveller: State-wise Subscription Count

8.7 Cross-Brand State Observations

Maharashtra is the top state for four out of five brands — Outlook Business (470), Outlook Money (938), Outlook Traveller (510), and Outlook Hindi (150, ranked 2nd). The only exception is Outlook, where Karnataka (435) narrowly leads Maharashtra (415). This makes Maharashtra the single most consistent high-contribution state across the Outlook portfolio.

Karnataka ranks in the top 3 for four brands (OL, OLM, OLT, OLB) and is driven primarily by Bangalore's subscriber concentration identified in earlier deliverables. It is the only Southern state to consistently feature this prominently across diverse brand categories.

Uttar Pradesh shows a dramatically different profile across brands — it ranks 5th for Outlook (273), 3rd for OLB (327), 1st for OLH (274), 5th for OLM (375), and 2nd for OLT (406). This signals UP's role as a high-volume subscriber state across content categories, driven by its large population and Hindi-speaking urban centres like Lucknow, Noida, and Ghaziabad.

Tamil Nadu and Andhra Pradesh are consistently strong for OLM and OLT but weaker for OLH — reinforcing the linguistic segmentation pattern. Southern states contribute proportionally more to finance and travel brands than to Hindi-language content.

The Army Post Office region contributes between 3 (OLB) and 84 (OL) subscribers across brands — most significantly for Outlook (84) and Outlook Hindi (57, ranked 8th), affirming that defence readership is strongest for general news and Hindi-language content.

Conclusion

Summary of Findings

This report presents a comprehensive analysis of the subscription dataset (Module 3.1), covering 16,519 subscriber records across five magazine brands — Outlook (OL), Outlook Business (OLB), Outlook Hindi (OLH), Outlook Money (OLM), and Outlook Traveller (OLT). The dataset, representing approximately 12% of the total subscription base, was first cleaned and structured before being analysed across seven deliverables spanning tenure patterns, expiry windows, city and state distributions, designation profiles, and city-level contribution percentages.

Key Takeaways by Deliverable

- **Deliverable 1 — Data Structuring:** The raw dataset was cleaned and standardised through city normalisation, designation categorisation, date formatting, and derivation of `TENURE_MONTHS` and `EXPIRY_MONTH` fields, resulting in a reliable 16,519-row structured dataset.
- **Deliverable 2 — Tenure Analysis:** The 7–12 month bucket dominates with 56.3% of all subscribers (9,300), confirming annual subscriptions as the standard purchase pattern. Outlook Money and Outlook Traveller lead this bracket. Long-tenure subscribers (10+ years) are almost exclusively Outlook Money readers, reflecting its legacy base.
- **Deliverable 3 — Expiry Analysis (May 2024–March 2025):** June 2024 is the peak expiry month at 4,904 subscriptions — more than double July 2024 (2,405). The June–August 2024 window accounts for approximately 55% of all expiries in the period, representing a critical renewal intervention window. Outlook Traveller dominates expiries in 9 of 11 months.
- **Deliverable 4 — Top 40 Cities:** Delhi leads for four of five brands; Bangalore leads only for Outlook Money. The C/O APO segment appears consistently across all brands, ranking as high as 2nd for Outlook Hindi — confirming a loyal defence-community readership. Outlook Hindi's geographic footprint is the most concentrated in the Hindi belt, while Outlook Money and Outlook Traveller are the most pan-India.
- **Deliverable 6 — Designation Analysis:** Consultants & Entrepreneurs is the most universal top designation across the portfolio. The unspecified rate across all brands is very high (83–95%), limiting the representativeness of designation insights. Outlook Money's specified cohort is the largest and most finance-professional in profile.
- **Deliverable 7 — City Contribution (%):** No city other than Delhi or Bangalore holds a top-2 contribution slot across any brand. Outlook Hindi has the highest 'Others' share (52.5%), indicating the widest grassroots spread into smaller towns. The top 40 cities typically capture 65–70% of each brand's subscriber base, though Outlook Hindi is a notable exception at 47.5%.
- **Deliverable 8 — State-wise Analysis:** Maharashtra is the dominant state for four of five brands. Karnataka and Uttar Pradesh are consistently high-volume across the portfolio. Uttar Pradesh ranks 1st for Outlook Hindi and 2nd for Outlook Traveller, reflecting its large Hindi-speaking, travel-curious population. Southern states (Tamil Nadu, Andhra Pradesh) are disproportionately strong for Outlook Money.

Cross-Cutting Insights

Several patterns emerge consistently across deliverables. Delhi and Bangalore are the twin anchors of Outlook's subscriber geography — no other city rivals their combination of scale and recurrence across brands. Maharashtra and Karnataka are the state-level equivalents, together accounting for the largest share of subscribers across most brands.

The defence readership segment, identifiable through C/O APO entries, is a distinctive and loyal subscriber group — most prominent in Outlook Hindi and Outlook (general), but present across the entire portfolio. Targeted retention and renewal strategies for this segment could yield disproportionate returns.

The dominance of annual (7–12 month) subscriptions across all five brands, combined with the concentration of expiries in June–August 2024, suggests that Outlook's renewal cycle is highly seasonal. A well-timed pre-expiry campaign in April–May each year could significantly improve retention rates across the portfolio.

Outlook Money consistently stands out as the brand with the largest subscriber base, the highest financial-professional designation profile, the only brand where Bangalore outranks Delhi at both city and state levels, and the lowest 'unspecified' designation rate — pointing to a more engaged, higher-income, and profile-complete subscriber segment relative to the other four brands.

Limitations & Recommendations

As the dataset represents only 12% of the actual subscription base and has been restructured for learning purposes, all findings should be interpreted with caution and should not be extrapolated directly to the full subscriber population. The high designation unspecified rate (83–95%) limits the depth of demographic profiling. Future analyses would benefit from more complete subscriber profile data, full-base coverage, and integration of renewal and churn outcome data to assess actual retention effectiveness.
